

PRESS RELEASE

RO-KA-TECH 2019

The SCHWALM SYSTEM – Great Events cast their Shadows before

Bad Hersfeld, March 6, 2019. Whether at the indoor stand in Hall H10/Stand C01 or on the outdoor site F10/01, you are again warmly welcome at the presences of Schwalm Robotic GmbH and Schwalm Kanalsanierung at RO-KA-TECH from May 8 to 12, 2019 in Kassel.

The preparations for SCHWALM's presence at this year's RO-KA-TECH are still running at full pace. However, we can already reveal some details. In the indoor area, designed in the company colors, Schwalm Robotic will present a large number of brand-new in-house developments as well as product diversifications of products of the SCHWALM SYSTEM that have been tried-and-tested for many years. These include milling and sewer rehab robots, sewer cameras, robot tools, HutlinerPacker®, as well as control with supply lines and their preservation. Additionally, visitors can expect insights into accessories usable on a cross-system basis, consumable material, and a great deal of expertise transfer. And to top it all off, SCHWALM will also announce an innovation that is being kept under wraps until the trade fair.

Yet there is more. While visitors to the trade fair can find out about the product range of the SCHWALM SYSTEM in the indoor area, at the same time, in the outdoor area the focus is on the practical use of the Schwalm products. Several times a day, the specialists of Schwalm Kanalsanierung will present moderated live demos. The placement of compression plugs and Hutliners® as well as the numerous possible

PRESS RELEASE

uses of the Schwalm robots Talpa FSR 1330 and 2060, in some cases with new or developed tool attachments, will be shown, among other things.

“Due to the thoroughly positive response during RO-KA-TECH 2017, this year, we will once again be represented with two stand areas,” explains Martin Schwalm, owner. “Owing to the presence of our service staff, customers will have the opportunity to experience the SCHWALM SYSTEM live in use. We are already looking forward to the fair and, in particular, to meeting you. From our perspective, there is no better way to get to know new products, to test them, and to answer questions on the technology and on on-site use in practical implementations.”

The Schwalm fair team looks forward to your visit. We will see you in Kassel in May. In Hall H10/Stand C01 as well as in the outside area F10/01.

About SCHWALM

Systems for trenchless partial sewer rehabilitation

Schwalm Robotic GmbH manufactures robotic systems and special vehicles for trenchless sewer rehabilitation. The systems' areas of application include main line and house connection rehabilitation, video diagnostics to assess damages, and image documentation. Robots, equipment, and sewer rehab vehicles are proprietary developments of Schwalm and are protected by patents.
