Systems for trenchless partial sewer rehabilitation

The product range includes sewer rehabilitation robots, HutlinerPacker® (*Lateral Connection Packers*) and sewer rehab vehicles. In addition, there is an extensive range of accessories for sewer renovation.

SEWER REHABILITATION ROBOTS

Talpa FSR 1330

Talpa FSR 2060

The Talpa FSR

Until now, Schwalm has brought two sewer rehab robots onto the market:
the **Talpa FSR 1330** and the **Talpa FSR 2060**.

Both robots were developed for the rehabilitation of main pipes and lateral connections. The building principle: a remote-controlled carriage, a free moving work arm with tool holder, supply lines for robot control and variable tool operation. Both robots are fitted with high-performance cameras. With the small Talpa FSR 1330, main pipes from 130 to 300 mm inner diameters can be accessed. The significantly larger Talpa FSR 2060 is used in inner diameters from 200 to 600 mm.

HUTLINERPACKER® + RUBBER HATS

HutlinerPacker® (*Lateral Connection Packers*) are inflatable hollow bodies made of rubber and stainless steel, with a side mounted protrusion, the rubber hat.

These special devices developed by Schwalm serve to compress artificial resin soaked shortliners onto fittings and cracks in the main pipes and hat profiles in connection integrations.

Rubber hats are highly elastic rubber bubbles, with which artificial resin hat profiles can be mounted onto lateral connections. Rubber hats are fitted with a universal thread, and can be screwed onto the HutlinerPacker® in just a few turns.

The system relevant **consumables** are available from Schwalm Robotic GmbH, and can be found on the website.

SEWER REHABILITATION VEHICLES

Premium technology with individual fitting details

The sewer rehab vehicles by Schwalm are custom-manufactured according to the customer's wishes. We only install system components and units from renowned manufacturers. According to the space available, the usable area is divided into workshop, operator room, WC and washing facilities. The centerpiece of a Schwalm sewer rehab vehicle is the workshop with sewer rehab robots, HutlinerPacker®, tool and material magazine.
